HOW IT OPERATIONS CAN SURVIVE AND THRIVE IN A MULTI-CLOUD WORLD

IT operations teams are contending with the reality that growing volumes of workloads are running across multiple cloud services. While multi-cloud environments are growing ubiquitous, many IT operations teams are still trying to get by with the same tools they've been using for years. The reality is that many tools designed to optimize on-premises data center resources simply don't suffice for applications and workloads running in public clouds. Consequently, as the use of cloud services grows prevalent, so does the incidence of cost overruns and security exposure. New approaches are required for IT and cloud operations teams to succeed in today's multi-cloud world.
